"MILK AS FOOD"

Produced and Distributed by Ford Motion  
Picture Laboratories.  
Copyrighted 1922 by Ford Motor Company.

SUB-TITLES:

1. Cow's milk is the cheapest and most nourishing of foods. It forms one-fifth of our diet. Seventy-two per cent of the babies live on cow's milk.
2. The best bred cow gives the finest milk. Green pastures with running brooks are chosen for the dairy farm.
3. The Jersey gives the richest milk. The Holstein's milk is almost like the mother's milk.
4. The milk from this peaceful Holstein herd goes to a great city. The milk supply of a city is an important health problem.
5. At sunset the cows come to the dairy barn.
6. Sweet and clean without flies or dust is the dairy.
7. Each cow finds her place which is marked with her name and number.
8. Hay and grain are fed when the cows are kept indoors.
9. Each cow is sprayed and the floor is washed clean.
10. Before milking each cow is wiped with a clean cloth, which keeps dust and dirt out of the milk. The milkers wash their hands, and dress in clean white suits.
11. The warm fresh milk is drawn from the cow into a pail through a cloth cover.
12. The milk of each cow is weighed. A careful record is kept. Low yielders are taken out of the herd. Some cows give 28 quarts daily.
13. The milk is strained and cooled.
14. It is tasted for butter-fat.
15. The feed value of milk. (Diagram)

.7%	- Minerals
3 %	- Protein
5 %	- Sugar
4.3%	- Fat
87 %	- Water.
16. Bacteria and harmful germs grow rapidly in warm milk. It must be kept at 50 degrees or lower. Large dairies have special cooling rooms.
17. Pasteurization means to heat milk to 155 degrees for thirty minutes. This prevents the growth of harmful germs. Our largest cities insist upon this process. It protects the babies.

(Milk as Food --- Sheet #2)

18. Steam and hot water are used to keep the bottles clean.
19. After Pasteurizing and cooling, the milk goes through pipes to the bottling machine.
20. The bottles are capped and the milk must be at your home within 36 hours. Stale milk is dangerous for babies and not fit for adults.
21. The cow gives the rich milk and mother keeps it clean and cold. Then we thrive -
22. Milk is liquid meat, without waste and easily digested.
23. One quart of milk is equal to -
  - 8 eggs
  - 2 pounds of fowl
  - 3/4 pound of steak
24. In cities less than a half pint of milk is consumed daily by each person. More milk used in your family means better health and a cheaper diet.
25. Milk is the food highest in growth-producing material, mineral salts and vitamins. Babies live on it. Children from 2 to 12 years require for health growth a glass each meal.
26. Protection and Care mean PURE MILK & Clean Bottles - Healthy Cows - Clean Workers - Temperature below 50%.

THE END.

Length - 780 feet.
